- Pre-Assessment
- Overview
- Objectives
- Frequently Asked Questions (FAQ)
- Summary
- Citation and References
- Post-Assessment

Abstract:

The Autism Internet Modules (AIM) project is designed to provide comprehensive information to assist those working and living with individuals with Autism Spectrum. The AIM project will develop a series of 60 modules by the time the project is complete on topics including assessment and identification, characteristics, evidence-based practices and interventions, transition to adulthood, and employment. Currently some of the modules are complete and some are under development.

Abstract:

The Interactive Collaborative Autism Network (ICAN) is a project supported by U.S. Department of Education grant H324M000047. The site was developed to disseminate information about characteristics, assessment, and research-based interventions and services for children and youth with autism spectrum. A series of modules categorized into eight domains are included.
